DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention: compounds comprising a non-steroidal anti-inflammatory drug (NSAID) linked to a sugar. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1. While NSAID defines a group of compounds with a common function they do not share a common structure. Applicant is cautioned that election of a specific compound that does not have specific written basis as filed may be determined to be New Matter.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. Examples of acceptable species to start the search can be found in paragraphs 17 and 18. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The chemical structure of the NSAIDs listed are different and they act at different stages of the pain or inflammatory response pathways.
